INFUSION AND SYRINGE PUMPS

Auxo Medical understands the importance of choosing the best infusion pumps for your facility. Auxo Medical provides infusion pumps from leading brands such as Braun, Baxter, and Alaris.

These pumps help provide the best in patient care for hospitals, nursing homes, and at-home care situations. In addition, they focus on accurate fluid and drug delivery requirements of today's medical environment. Furthermore, many of our infusion pump options offer both continuous and intermittent infusion options. Built for drug solutions, whole blood, and packed red blood cells, our infusion machines cover a variety of intravenous, intra-arterial, epidural, and subcutaneous options for administration.

Auxo Medical's infusion pumps make it easy for you to deliver top quality patient care and safety. Our selection of innovative infusion units help maintain safety and workflow within any facility by reducing medication errors and streamlining your medication management.

Our catalog consists of brand new, reconditioned and refurbished equipment. Would you like to filter the

MEDFUSION 3500 V 3.0.6 SYRINGE PUMP

The **Medfusion 3500 Syringe Pump with Version 3.0.6 Software** is a versatile, advanced infusion device suitable for use across various hospital departments and physician practices. This refurbished "smart pump" features automatic detection of multiple syringe types from seven different manufacturers, ensuring enhanced safety and precise drug delivery. Designed for ergonomic single-hand loading and easy mounting on IV poles or bassinets, it utilizes FlowSentry technology to promote patient safety and medication accuracy. Capable of infusing at flow rates from 0.01 mL/hr up to 1130 mL/hr, it supports low-flow infusions with larger syringes and is MRI compatible. Sold refurbished with a 6-month warranty, the Medfusion 3500 offers reliable, accurate, and flexible syringe infusion management

ALARIS MEDLEY 8015 POINT OF CARE MODULE (SOFTWARE VERSION 9.33)

The **Alaris Medley 8015 Point of Care Module (Software Version 9.33)** is a versatile, advanced component of the Alaris® System designed to support adult, pediatric, and neonatal patient care. It features a unified user interface for programming infusion and monitoring functions, enhancing clinical efficiency and safety. The system includes the Guardrails® Suite MX safety software, which provides double-checks of dose, duration, and delivery rate for every infusion, along with wireless connectivity for seamless communication and real-time analytics. Compatible with the Alaris Medley 8100 Infusion Pump, the module offers exceptional versatility, increased IV safety, and robust protection features. Its compact dimensions are 6.9" W x 8.8" H x 9" D with a pole clamp, and it weighs approximately 7.2 pounds. The system's internal memory ensures configuration data retention for at least six months, with module-specific settings stored for 8 hours when powered off. Powering the system requires 100-240V at 50/60 Hz, with a maximum power draw of 150VA.

Warranty: 6 Months

Compatible with the Alaris Medley 8100 Infusion Pump.

ALARIS 8120 PCA SYRINGE PUMP

The **CareFusion Alaris 8120 PCA Syringe Pump** is an advanced infusion device designed for safe and effective patient-controlled analgesia (PCA) management. Integrated within the Alaris® System, it combines programming safety features, barcoding capabilities, and continuous respiratory monitoring into a comprehensive pain control solution. The PCA module offers quick access to total dose history and trending data, enabling healthcare providers to analyze patient responses and optimize pain therapy. Notably, it can automatically pause PCA infusions and deactivate dose requests if the patient's oxygen saturation (SpO_2) or exhaled CO2 ($EtCO_2$) levels fall below hospital-defined thresholds when used with the PCA module. The pump allows for different dose ranges for the same drug based on patient diagnosis (e.g., acute vs. chronic pain) and supports barcoding to ensure the accuracy of drug, patient, and clinician identification. Its intuitive interface simplifies programming, reducing training time, while the Guardrails® Suite MX software enables customizable alarm limits and trend monitoring. When combined with the Auto-ID module, it provides reliable barcoding for the right drug, patient, and clinician, enhancing safety and workflow efficiency in pain management.

EITAN MEDICAL SAPPHIRE EPIDURAL INFUSION PUMP (NEW)

This professionally refurbished **Eitan Medical Sapphire Epidural Infusion Pump** is a compact, reliable, and precise device designed specifically for epidural infusion therapy. Weighing approximately 14.7 ounces and measuring about 5.63" high, 3.78" wide, and 1.93" deep, this pump offers seamless portability for use in diverse clinical environments. It features a broad volume capacity of 1 to 9999 mL with high delivery accuracy of ± 2.5%, supporting flow rates from 0.1 to 99.9 mL/hr (increments of 0.1 mL/hr) and higher rates up to 999 mL/hr. The Sapphire epidural pump is powered by a standard 100-240 V supply, with an impressive battery life of 24 hours at 125 mL/hr, and includes safety alarms for occlusions, cassette issues, flow errors, and insufficient battery to ensure safe operation. Its design incorporates essential accessories such as an AC charger, bolus cord, and mini cradle with pole clamp, making it an efficient, user-friendly solution for delivering precise epidural therapy with confidence.

EITAN MEDICAL SAPPHIRE™ MULTI-THERAPY INFUSION PUMP (NEW)

The **Sapphire™ Multi-Therapy Infusion Pump** (OEM: EIT17000-028-0072 / 17000-028-1039) is a versatile, compact, and user-friendly device engineered to deliver a broad range of intravenous therapies with precision across various healthcare settings, including hospitals, ambulances, and home care. Supporting multiple infusion modes such as continuous, intermittent, total parenteral nutrition (TPN), patient-controlled analgesia (PCA), and epidural, it offers unparalleled flexibility to meet diverse patient needs. Renowned for its reliability and accurate dosage delivery, the Sapphire™ pump features an intuitive interface, robust safety alarms—including occlusion detection, cassette misplacement, and flow errors—and drug library access that enhance patient safety and caregiver confidence. With a lightweight design weighing approximately 14.7 ounces and a battery life of approximately 24 hours at 125 mL/hr, it ensures portability and uninterrupted therapy. Its precise flow rate capabilities (0.1 to 99.9 mL/hr with 0.1 mL/hr increments), a broad volume range up to 9999 mL, and a delivery accuracy of ± 2.5% make it an essential tool for delivering complex therapies efficiently, improving patient outcomes, and streamlining infusion management.

EITAN MEDICAL SAPPHIRE™ MULTI-THERAPY INFUSION PUMP WITH LOCKBOX/CRADLE (REFURBISHED)

This professionally refurbished **Eitan Medical Sapphire™ Multi-Therapy Infusion Pump with Lockbox/Cradle** is a sophisticated and versatile device designed to provide precise intravenous therapies across diverse clinical settings, including hospitals, ambulances, and home care. Compact and lightweight at approximately 5.63" high, 3.78" wide, and 1.93" deep, and weighing about 14.7 ounces without the battery, this pump offers a broad volume capacity of 1 to 9999 mL with a delivery accuracy of ± 2.5%. Supporting multiple infusion modes such as continuous, intermittent, total parenteral nutrition (TPN), patient-controlled analgesia (PCA), and epidural, it ensures safe and accurate medication or nutrition administration. Battery life extends up to 24 hours at 125 mL/hr, and safety features include alarms for occlusions, cassette misplacement, flow errors, and low battery, with occlusion alarms capable of withstanding pressures up to 17.4 PSI. The device’s intuitive interface, combined with a lockbox and cradle for secure placement and easy transport, makes it an essential tool for delivering complex therapies reliably and safely, helping healthcare professionals improve patient outcomes and streamline infusion management.

MEDFUSION 4000 SYRINGE PUMP

The **Medfusion 4000 Syringe Pump** is a leading infusion device designed to deliver safe, precise medication administration across a wide range of clinical settings, including critical care, anesthesia, neonatal, and pediatric applications. Building on the trusted platform of the widely used Medfusion 3500, the 4000 offers enhanced pump functionality and an improved drug library, supported by PharmGuard Medication Safety Software and Server Software to ensure safe and straightforward operation. Its advanced features include accurate delivery within ±2% across flow rates from 0.01 mL/hr to 1130 mL/hr, and proprietary smart pump technology that promotes configurable drug libraries, making infusion more reliable than traditional methods. The ergonomic, horizontal design allows clinicians to load syringes easily with one hand, while FlowSentry pressure sensing technology enables early detection of infusion issues for timely clinical intervention. The pump supports both wireless and wired data collection, report generation, and seamless device updates, simplifying quality improvement initiatives. It also boasts extended memory for comprehensive historical data storage, IPX3 fluid resistance, and user-friendly Windows-based software for efficient data reporting. Additionally, PharmGuard Server Software manages drug library configurations, firmware updates, and generates detailed clinical, IT, and biomedical reports, all employing industry-standard protocols and databases. Complete with a pole clamp and AC adapter, the Medfusion 4000 is a versatile, reliable solution for delivering critical medications safely and accurately in any hospital environment.

MEDFUSION 3500 V6 SYRINGE PUMP

The **Medfusion 3500 V6 Syringe Pump**, enhanced by PharmGuard Medication Safety Software, offers an intuitive and safe medication delivery system. Its large screen displays up to 30 characters per drug name, minimizing abbreviation errors, and the bright LCD backlight ensures clear visibility in any lighting. The pump's extensive configurability allows for customizable clinical alerts, promoting best practices. Features include programmable weight, volume, and occlusion limits; support for loading and bolus dose therapies; adjustable alarm settings; and FlowSentry rapid occlusion detection for continuous pressure monitoring. The horizontal syringe plunger simplifies loading and unloading, protecting the barrel. A 10-hour battery life ensures reliable operation. The Medfusion 3500 V6 combines advanced features with ease of use to improve medication safety and efficiency.

BAXA REPEATER PUMP

The **Baxa Repeater Compounding Pump** is a versatile Peristaltic pump which has played an important role in routine pharmacy procedures – delivering accuracy and multi-speed settings for fluid transfer processes. Designed to reduce the workload of pharmacy technicians, the Baxa Repeater Pump facilitates the automated fluid transfer.

With compact dimensions, the Repeater Pump offers flexibility in placement options – fit it within a standard hood or mount it on the available pump stand. Accurate to volumes as low as 0.2 mL (± 10%), the Repeater Pump was designed to transfer fluids from 0.2 mL to 9,999 mL at flow rates up to 13.5 mL per second with a 16G needle. Designed for quick set up to help streamline pharmacy operations, the versatile Repeater Pump can support any size pharmacy, handling a wide range of fluid transfer and filling applications with efficiency and accuracy.

MEDFUSION 3500 SYRINGE PUMP WITH VERSION 5 SOFTWARE

The **Medfusion 3500 Syringe Pump** is a cutting-edge device designed to meet the needs of various departments within hospitals and medical practices. This refurbished pump features intuitive syringe detection capabilities, enhancing safety and accuracy in drug administration. Known as a "smart pump," it accommodates syringes from seven different manufacturers, ensuring versatility for healthcare providers. Its ergonomic design allows for single-hand loading, making it easy to operate, while its mounting options enable secure placement on IV poles or bassinets. Additionally, the Medfusion 3500 employs **FlowSentry technology**, which further safeguards patient safety and ensures precise drug delivery. With an accuracy of +/- 2% and compatibility with MRI settings, this advanced syringe pump is an essential tool for improving medication administration in any clinical setting. The inclusion of Version 5 Software enhances its functionality, providing healthcare professionals with a reliable and efficient solution for intravenous therapy.

VOLUMAT MC AGILIA INFUSION PUMP

The **Volumat MC Agilia Infusion Pump** is a highly versatile and precise infusion device designed to accommodate a wide range of clinical needs, from routine fluid delivery to complex medication protocols. It features a flow rate range of 1–1500 mL/h in normal mode with 1 mL/h increments, and 0.1–99.9 mL/h in micro mode with 0.1 mL/h increments, with the ability to set soft and hard limits for drug safety via Vigilant®, the IV Medication Safety Solution. Its extensive infusion modes include volumetric, dose-based, ramp-up/down, intermittent, secondary, and drop/min, with advanced programming options such as drug labeling and customized drug libraries. The pump is equipped with the Occlusivity Check System (OCS) for auto-testing infusion line integrity, dynamic pressure warnings through DPS, and dual pressure modes to enhance safety. Its manual or programmable bolus feature provides up to 1500 mL/h, adjustable in 50 mL/h steps, while the rechargeable Li-Ion battery offers at least 8 hours of continuous operation. Compact at approximately 145 x 130 x 135 mm and weighing around 2 kg, the Volumat MC Agilia ensures accurate, safe, and flexible infusion therapy management across diverse healthcare environments.

PLUM 360 INFUSYSTEM

The **Plum 360 Infusystem** is a versatile and highly efficient infusion pump designed to meet a wide range of clinical needs. With dimensions of approximately 8 inches in height, width, and 6 inches in depth, and weighing around 10 lbs (4.5 kg) with the battery, it is compact and portable. It operates on a battery life of roughly 3 hours at rates up to 125 mL/hr on a single line, or it can deliver at least 250 mL if the rate exceeds 126 mL/hr. The device requires a power input of 120 V~, 50 to 60 Hz, and 50 VA, with an approximate recharge time of 8 hours while running at 125 mL/hr. The volume range extends from 0.1 to 9999 mL, allowing for precise delivery in 0.1 mL and 1 mL increments. Delivery rate accuracy is maintained within ± 5% for rates between 1 to 999 mL/hr and ± 10% for rates between 0.1 to 0.9 mL/hr. Its dual-line system can deliver between 0.1 to 999 mL/hr per line, with a concurrent delivery minimum of 0.5 mL/hr per line. The PlumSet can manage a cumulative delivery rate of up to 500 mL/hr for both lines combined. The system includes several alarms for occlusion, air-in-line, low battery, door opened while pumping, lockout violation, VTBI complete, valve/cassette test failure, and more, ensuring safety and reliability. The occlusion alarm pressure can be set between 1-15 psig, with a default limit of 6 psig. This comprehensive set of features

makes the Plum 360 Infusystem a dependable choice for healthcare providers.

WALKMED 350VL INFUSION SYSTEM

The **WalkMed 350VL Infusion System** is a highly reliable ambulatory infusion pump designed for precise delivery of medications and fluids through various routes, including intravenous, subcutaneous, arterial, enteral, and epidural. Renowned for its trouble-free performance and accurate low-rate infusion capabilities, it is particularly well-suited for chemotherapy treatments. Features such as patient lockout, volume tracking, auto-occlusion alarm recovery, and a symbolic keypad ensure safety and ease of operation. Compact and lightweight—measuring 4.4 x 4.0 x 1.5 inches and weighing just 12.8 oz.—the system is intended for use in controlled settings, with contraindications including blood, blood products, insulin, and critical medications where interruption could lead to serious injury or death. Its programmable total volume and delivery tracking, combined with safety features like keypad lockout and alarm silencing, make the WalkMed 350VL a dependable choice for precise ambulatory infusions.

HOSPIRA LIFECARE PCA3

The **Hospira Lifecare PCA3** is an advanced patient-controlled analgesia (PCA) system designed to improve pain management safety and efficiency, especially when integrated with Hospira MedNet software. It features customizable drug libraries, an integral barcode reader for medication verification, and support for multiple clinical care areas with up to 18 medication rule sets. The system's intuitive, human factors-designed interface includes confirmation screens, stored protocols for quick programming, and pre-filled, color-coded bar-coded medication vials to reduce errors. Wireless connectivity enables real-time infusion monitoring and support for 5-rights verification, ensuring accurate medication delivery. Compact at 8"W x 13"H x 6"D, weighing approximately 10 lbs. with a rechargeable 8V lead-acid battery offering around 4 hours of continuous use, the Lifecare PCA3 combines safety, flexibility, and ease of use for effective analgesia therapy.

CURLIN 6000 CMS

The **Curlin 6000 Clinical Management System (CMS™)** is a versatile, multi-therapy ambulatory infusion device designed to deliver a wide range of infusion modes, including PCA, PCEA, subcutaneous, TPN, intermittent, and variable therapies. Its advanced curvilinear peristaltic pump mechanism ensures precise fluid delivery while continuously monitoring line pressure to help detect potential catheter issues such as occlusions, obstructions, or pinched lines. Powered by alkaline batteries or rechargeable external packs, it offers exceptional battery life—up to 10 hours at 400 mL/hr, 30 hours at 125 mL/hr, and 85 hours at 2 mL/hr—making it ideal for complex clinical environments. The system features multiple alarms for critical safety alerts, adjustable alarm volume, and convenient review functions including Immediate On-Demand (IOD) data access for therapy verification. Compact, lightweight at 18.1 oz, and equipped with a clear, backlit display, the Curlin 6000 CMS provides reliable, continuous infusion management with flexible flow rates up to 400 mL/hr and adjustable volume limits for tailored patient care.

CURLIN 4000 CMS

The **Curlin 4000 CMS** is an advanced, multi-therapy ambulatory infusion pump designed for precise medication delivery across various clinical applications, including continuous, PCA (IV, epidural, subcutaneous), TPN with ramping, intermittent, and variable dosing with up to 24 preset doses. Built with non-DEHP, PVC-free administration sets, it offers superior flow resolution—up to 25 times better at low rates—enabling highly accurate infusion even at minimal flow levels. Its standout feature is real-time line pressure monitoring, aiding in early detection of catheter patency issues such as occlusions or obstructions. The system's configurable alarms, including infusion completion, occlusion alerts, and low battery notifications, enhance safety, while its compact size (5"H x 4"W x 2.5"D) and lightweight design (17.5 oz) ensure portability. Powered by alkaline batteries or rechargeable external packs, the Curlin 4000 CMS delivers an exceptional combination of precision, versatility, and safety, optimizing patient outcomes in diverse clinical settings.

B. BRAUN INFUSOMAT SPACE

The **B. Braun Infusomat Space** is a compact, lightweight, large-volume infusion pump designed for both adult and pediatric acute care environments. Measuring just 9" x 6" and weighing approximately 1.4 kg (3 lbs), it offers easy mobility and the ability to stack up to 24 units for streamlined bedside management. The pump features an intuitive user interface with audible and visible differentiated alarms, a strong pole clamp for secure mounting, and an extensive 1,500-entry drug library for quick access and safety. Its single-channel design includes KeyGuard™ for preventing programming errors and supports wireless integration for interoperability across care systems. The backlit graphic display provides a clear view at a ~40° angle, while flow rates range from 0.01 to 1800 mL/h. Powered by an external Space Power Supply or SpaceStation, it offers impressive operational times—up to 16.8 hours at 1 mL/h—making it a versatile, efficient infusion solution in diverse clinical settings.

CADD LEGACY PLUS PUMP

The **Legacy Plus Model 6500** is the latest addition to the esteemed CADD family, renowned for its therapy-specific delivery systems. This innovative pump sets a new benchmark for continuous and intermittent ambulatory infusion, particularly in research settings. CADD pumps have enjoyed a stellar reputation for accuracy and durability since their inception in the early 1980s, and the CADD-Legacy PLUS model continues this tradition. Designed for both continuous and intermittent therapies, the pump comes with a single-use 50-/100-ml pump pouch, 2 AA alkaline batteries, and an operator's manual. Among its impressive features are an easy-to-read display for straightforward programming and troubleshooting, a cassette detection sensor, and occlusion sensors to alert users of any interruptions in fluid delivery. Additionally, the air-in-line detector ensures patient safety by detecting air presence in the administration set tubing. The ON/OFF key conserves battery life, while an event memory that records up to 1,000 events can be accessed via the CADD-DIPLOMAT PC Communications System. The pump's reliability means fewer therapy interruptions, and its programming flexibility, with infusion rates up to 125 mL/hr and dose volumes up to 1,000 ml, accommodates high-rate, high-volume therapies. Enhanced delayed start times and dosing parameters provide the adaptability needed for complex therapy regimens, ensuring that the internal clock keeps dosing on

schedule.

BAXTER SIGMA SPECTRUM INFUSION PUMP WITH 6.02 SOFTWARE

The **Baxter Sigma Spectrum Infusion Pump with 6.02 Software** is a compact, user-friendly, patient-centered infusion device designed to enhance safety and efficiency in clinical settings. Equipped with Baxter's Dose Error Reduction Software (DERS), it significantly helps prevent pump-related medication errors through features like titration error prevention, flow alerts, and automatic medication dose updates. Its versatile infusion profiles support both automated ramped delivery and manual multi-step infusions, making it suitable for a wide range of therapies. The pump's compatibility with standard IV sets streamlines setup and reduces free-flow risks, while its rechargeable lithium-ion battery ensures reliable, portable operation without the need for disposable batteries. With a bright, large-type color display, pump-guided programming, and onboard help screens, the Sigma Spectrum offers quick, intuitive operation. Optional wireless communication and Continuous Quality Improvement (CQI) reporting further support therapy monitoring and compliance. Measuring just 5.8" H x 4.2" W x 2.5" D and weighing only 1.6 lbs, this lightweight infusion pump is ideal for busy healthcare environments requiring precise, safe, and efficient medication delivery.

Battery Options:

- Standard non-wireless battery
- w/ Single Antenna BG Battery

BAXTER PCA II

The **Baxter PCA II** is a sophisticated syringe infusion pump designed for safe, precise, and flexible patient-controlled analgesia (PCA) in hospital settings. Capable of delivering both continuous and intermittent infusions, it features internal safety checks to reduce tampering and errors, along with a user-friendly, large back-lit display for easy operation even in low-light conditions. The device offers multiple programmable modes—including PCA only, basal plus PCA, and continuous basal—programmable by milliliters or milligrams, and accommodates both pre-filled and standard syringes for convenience and cost savings. Its built-in history logs track successful injections, attempts, alarms, and operational details, with optional hard-copy reports when connected to a printer. Compact and lightweight at 13 inches high, 6.3 inches wide, and weighing just 4.2 pounds with batteries, the Baxter PCA II provides a reliable and efficient solution for pain management with a flow accuracy of ±3% over a range of 0.1 to 150 mL/hr.

B. BRAUN PERFUSOR SPACE SYRINGE PUMP

The **B. Braun Perfusor Space Syringe Pump** is a highly advanced, compact medical device designed to deliver precise doses of medication to patients in various healthcare settings. Renowned for its accuracy and reliability, this syringe pump is an integral part of modern infusion therapy protocols. It is engineered to work within the B. Braun Space system, a comprehensive solution that allows for seamless integration with other infusion devices, thereby enabling a flexible, modular approach to patient care. The Perfusor Space Syringe Pump is equipped with sophisticated safety features, including automatic syringe size recognition and drug library compatibility, which significantly minimize the risk of medication errors. Its user-friendly interface ensures ease of use for healthcare professionals, facilitating the efficient administration of critical medications. With its compact size, it offers exceptional versatility, making it suitable for use in intensive care units, operating rooms, and even in patient transport scenarios.

BAXTER 6301 INFUSION PUMP

The **Baxter 6301 Infusion Pump** is a versatile, advanced dual-channel volumetric infusion system designed to meet a wide spectrum of clinical needs with high precision and safety. Capable of delivering fluids over a broad range of rates—from as low as 1 mL/hr to a maximum of 9,999 mL/hr in single and multiple channels—the pump supports continuous, secondary (piggyback), and patient-specific protocols with automatic flow rate calculation once volume and time are set. Key features include remote operation and monitoring, an 80% recharge time of 8 hours, and enhanced safety with flow check occlusion alarms and front panel lockouts to prevent tampering. The device automatically restarts after occlusion clears, providing automatic secondary medication piggybacking, and retains infusion data for 5 hours without power. Compact, weighing 8.1 kg (17.9 lbs) with dimensions of 33 cm W x 13 cm D x 29 cm H, and powered by a 12V battery lasting up to 6 hours at high flow rates, the Baxter 6301 offers reliable, precise, and efficient infusion management for diverse patient care environments.

ALARIS MEDSYSTEM 2865

The **Alaris MedSystem 2865** is a versatile, compact multi-channel infusion pump designed for a range of clinical settings, including ambulatory care, emergency medical services, and air transport. It features three independent fluid delivery channels with customizable settings, including a drug library and a user-adjustable dose calculator, enabling safe and efficient infusion management. Its lightweight design (weighing approximately 5.1 lbs) and small dimensions (8" x 6" x 2") facilitate easy transport and bedside organization. The system supports infusion of IV, intra-arterial, epidural, and subcutaneous medications from various containers, including syringes with its syringe adapter set. Key safety features include set-based, needle-free, free-flow protection. Programming is streamlined with single-page dose rate calculation, user-tunable drug library, and titration options. It operates on 6-watt AC power, with rechargeable NiCad batteries and a non-rechargeable backup, providing a wide delivery range from 0.1 to 999 mL/hr and a KVO rate from 0.1 to 20 mL/hr. The pump comes complete with a charger and pole clamp, making it suitable for flexible, safe infusion delivery in various clinical environments.

B. BRAUN OUTLOOK 100

The **B. Braun Outlook 100** is a compact, user-friendly infusion system designed to enhance medication safety at the point of care. Its large color display and extensive customizable drug library enable clinicians to configure the pump according to specific clinical protocols, helping to reduce medication errors. Featuring a built-in "brain" for each channel, it effectively prevents channel confusion, while the active dose limit display and KeyGuard™ keypad with arrow controls simplify operation and minimize manual input errors. Additional benefits include an air trapping cassette for nuisance alarm prevention, improved battery life, and flexible configurations for loading doses and on-demand boluses for all DoseGuard drugs. Its streamlined single-screen programming limits reliance on memory, making it straightforward to use. The Outlook 100 delivers reliable, accurate infusions with a flow accuracy of ±5%, supporting rates from 0.1 to 999.9 mL/h and a volume capacity up to 999.9 mL. Compact, stackable, and weighing just 5 kg, it is ideal for busy clinical environments requiring efficient, safe infusion management.

ALARIS 8000 PC POINT-OF-CARE UNIT

The **Alaris 8000 PC Point-of-Care Unit** serves as the central hub of the Alaris System, offering a unified user interface that simplifies programming and monitoring of infusion modules, thereby reducing complexity at the point of care. Formerly known as the Medley System, this modular platform provides integrated SpO2 monitoring and ensures precise, automated infusion of a wide variety of intravascular fluids, medications, and blood products. Compact and lightweight at just 7.2 pounds, with dimensions of 6.9" W x 8.8" H x 9" D, it can operate on battery power, with runtime depending on attached modules and activity levels. Equipped with an RS-232 communication port (RJ45 connector) and advanced memory backup, the Alaris 8000 maintains system configuration parameters for up to 6 months and module-specific settings for 8 hours when powered off. Designed for versatility and ease of use, this unit is compatible with the Alaris Medley 8100 Infusion Pump, making it an essential component for efficient, safe patient infusion management in clinical settings.

ABBOTT TRIPLE CHANNEL PLUM A+ IV

The **Abbott Plum A+ Triple Channel IV Pump** is an advanced, wireless-enabled infusion system designed to deliver precise, reliable medication management in high-acuity healthcare environments such as ERs, ICUs, and oncology centers. Engineered to support up to six concurrent infusion lines in one compact unit, the Plum A+3 allows clinicians to administer simultaneous or tiered medication infusions with exceptional accuracy and safety. Its distributed system architecture helps safeguard against multiple channel errors, while automated piggyback delivery, loading dose automation, programmable delayed starts, and multistep delivery enhance clinical efficiency and workflow. With a rechargeable battery, hospital-grade 10-foot AC power cord, and the flexibility to deliver secondary infusions via IV container or syringe, this IV infusion pump is built for consistent, proven performance. Measuring 13.75" H x 12.2" W x 7.5" D and weighing 20 lbs with batteries, the Abbott Plum A+ Triple Channel system optimizes bedside space, asset management, and productivity—making it a trusted solution for complex medication dosing regimens.

ABBOTT PLUM A+ IV INFUSION PUMP, SINGLE CHANNEL

The **Abbott Plum A+ IV Infusion Pump** is a versatile, reliable device designed to deliver precise, multi-channel infusions across various clinical settings. Featuring three independent channels with individual lines, it supports simultaneous delivery of multiple medications with advanced capabilities like fully automated secondary drug delivery, concurrent flow, and a variety of dosing and delivery options—including 15 preferred rates. Its innovative PlumSet™ technology ensures confident infusions, while air-in-line detection and automated backpriming minimize contamination risks by safely removing trapped air without disconnecting the patient line. The pump can administer secondary infusions via IV container or syringe and offers flexible programming features such as piggyback, multistep delivery, delayed starts, and programmable standby settings. Compact and sturdy, measuring approximately 8" H x 8" W x 6" D and weighing around 9.5 lbs, the Abbott Plum A+ provides steady, proven performance and seamlessly integrates into the entire spectrum of patient care, making it an essential tool for enhancing infusion safety and

efficiency.

ALARIS MEDLEY 8100 INFUSION PUMP

The **Alaris Medley 8100 Infusion Pump Module** is a high-capacity, large-volume infusion device designed to seamlessly integrate into the modular Alaris System, operating in conjunction with the Alaris PC Point of Care Unit (Models 8000 or 8015). Compact and lightweight, measuring just 3.3" W x 8.9" H x 5.5" D and weighing approximately 2.5 lbs, this positive displacement pump provides precise and reliable delivery of fluids across a flow rate range of 0.1 to 999 mL/h, with customizable VTBI up to 9999 mL and adjustable Keep Vein Open rates. Its advanced safety features include Guardrails Suite MX, ultrasonic air-in-line detection, and automatic free-flow protection, ensuring patient safety during complex infusion therapies. The pump supports multiple infusion modes—continuous, intermittent, bolus, and secondary—and features pressure sensing with adjustable occlusion limits from 50 to 525 mmHg, displayed in real time via a dynamic pressure bar graph on the PC Unit. Its compatibility with dedicated Alaris infusion sets, along with environmental resilience to operate between 41°F and 104°F, makes the Alaris 8100 an essential component for hospitals and clinics seeking reliable, safe, and versatile infusion management.

ALARIS MEDLEY 8015 POINT OF CARE MODULE

The **Alaris Medley 8015 Point of Care Module** is a versatile, modular infusion and monitoring system designed for adult, pediatric, and neonatal care, providing clinicians with a unified interface for programming and managing multiple channels simultaneously. This compact unit, weighing only 7.2 pounds and measuring 6.9" W x 8.8" H x 9" D (including pole clamp), offers wireless connectivity to enhance IV safety and facilitate seamless clinical workflows. It features powerful analytics, exceptional versatility, and the most comprehensive safety protections available through Guardrails® Suite MX software, which double-checks dose, duration, and delivery rate to prevent errors. Its advanced memory system retains configuration parameters for up to 6 months, with module-specific data stored for 8 hours when powered off. Designed for modern healthcare environments, the Alaris Medley 8015 improves patient safety, clinical efficiency, and adherence to best practices across a broad spectrum of care settings.

BAXTER FLO-GARD 6201

The **Baxter Flo-Gard 6201 Volumetric Infusion Pump** is a dependable, high-performance IV pump designed to deliver precise fluid administration across a wide range of infusion rates. Ideal for hospitals, surgical centers, and clinical settings, this single-channel infusion pump offers enhanced safety features such as a Flow Check Occlusion Alarm with in-line resistance monitoring, automatic restart after occlusion clearance, and a slide clamp option to prevent inadvertent gravity free flow. The Flo-Gard 6201 automatically calculates flow rates once volume and time are entered, supports programmable delivery profiles with up to 10 steps for customized infusion ramping and tapering, and allows incremental flow rate adjustments from 0.1 mL/hr up to 1,999 mL/hr. With automatic piggyback capability for secondary medications, front panel lock-out protection, and compatibility with Baxter standard IV administration sets to reduce waste and costs, this volumetric infusion pump combines versatility, convenience, and reliability. Compact and portable at 11.4” high, 8” wide, and 11.6 lbs, it operates on a 12-volt sealed lead-acid battery, making the Baxter Flo-Gard 6201 a trusted solution for accurate, controlled IV therapy.

B. BRAUN VISTA BASIC INFUSION PUMP

The **B. Braun Vista Basic Infusion Pump** is a reliable, easy-to-use volumetric IV pump designed for outpatient, home care, and clinical settings where simplicity and durability matter most. With over 100,000 units sold worldwide, this proven infusion pump delivers continuous, piggyback, and program modes while supporting cost-effective straight-line gravity sets for efficient operation. The Vista Basic features intuitive programming with helpful on-screen prompts, quick tubing installation, and adjustable occlusion settings to enhance patient safety. Built with a robust mechanical design, pump-based and optional set-based free-flow protection, and DEHP-free, needle-free IV sets, it prioritizes both patient and clinician protection. A long-lasting battery with approximately three years of life, oversized display, ergonomic handle, and integrated bag hook ensure portability and convenience without the need for an IV pole. Dependable, durable, and simple to teach and learn, the B. Braun Vista Basic is a trusted infusion pump solution for consistent, safe IV therapy delivery.

BAXTER INFUSO.R. SYRINGE PUMP W/ PROPOFOL SMART LABEL

The **Baxter Infus O.R. Syringe Pump** is a compact, easy-to-use infusion device specifically designed to support the precise delivery of intravenous medications during anesthesia and surgical procedures. Ideal for administering narcotics, muscle relaxants, vasoactive agents, and other anesthesia-related drugs, this lightweight syringe pump weighs just 2 lbs with batteries and operates on four “C” alkaline batteries (5–7 volts) for dependable portability. Featuring magnetically coded, drug-specific **SMART LABELS**, the Infus O.R. helps minimize medication dosing errors, reduce calculation time, and simplify programming by allowing clinicians to quickly select from an available drug library and modify infusion parameters without complex reprogramming steps. Flow rates from 0–600 mL/hr, intuitive front-panel rotary switches for one-handed adjustments, and clear alarms for infusion complete, battery, and malfunction enhance safety and workflow efficiency in the operating room. Measuring 9.2 x 4.5 x 2.0 inches, the Baxter Infus O.R. Syringe Pump delivers reliable, accurate, and convenient syringe-based IV infusion therapy when precision matters most.
